

WATER COMMITTEE

September 2008

Currently there is no Water Committee.

Completed in the last year:

- RO membranes replaced. RO 100% Functional. RO not 100% efficient. (Sea Water Induction Issue – see below)
- Water Kitchen Rebuilt and functional
- Green Sand Filter Media installed and operational
- Chlorine Injection System installed and operational

Currently in Progress

- Software for RO being upgraded and enhanced to be in synchronization with current system parameters.
- System will be taken “off line” for winter.

Future Goals and Challenges

- Develop a committee.
- Work to explore ways to Increase Water Quality System Wide.
- Work to explore incentives for conservation through consumption based pricing.
- Map Entire System for future Managers and staff.
- Bring the RO up to 100% Efficiency. This will require an engineering study as to the best method of Raw Sea Water Induction. Currently deep beach wells are used which over time have become inefficient.
